4. Installation Instructions	5
5. Known Issues	5
6. Compatibility	5
7. Getting Help	5

1. Version Summary

Version 1.1.0.7 is the latest version of Clavister PinPoint.

2. New Features

The following sections detail new features and enhancements in Clavister PinPoint 1.1. For a description of the features in Clavister PinPoint 1.1, please refer to the Clavister PinPoint User Guide 1.1.

2.1. New Features and Enhancements in PinPoint 1.1

Custom title for gauge controls

A custom title property has been added to all gauge controls.

Stacked charts

Support for stacked charts added to the bar chart control.

Support for CorePlus 9.0 Security Gateways

Added the possibility to use CorePlus 9.0 devices in the application. Gateways can now be added using the IP address and the key.

Implement support for new CorePlus "F32" data type

Added support for the "F32" data type (32 bit float). This data type is predominantly used in hardware monitoring (HWM) counters on CorePlus 9.0 Security Gateways.

Slideshow mode

Added a slideshow mode with two different effects: fade, and pixelation.

Users should be able to reset values in the property browser

Added a context menu in the property browser that gives the user the option to reset a value. Also added the possibility to hide the description box at the bottom of the control.

Show paths in bar chart control

A new property controlling whether to show paths in the bar chart or not, was introduced.

New visual style of application

Added a new visual style to the application. The visual style can now be selected in the preferences dialog. A restart is needed for the change to take effect.

Turn off FineTune support option

Added a setting in the preferences dialog to control if the application should look for FineTune datasources or not.

3. Addressed Issues

The following sections detail the addressed issues in Clavister PinPoint 1.1 release.

PIN items refer to issues in Clavister PinPoint

3.1. Addressed Issues in PinPoint 1.1

- **PIN-195:** Some gateways did not show up in the interface when using multiple datasources. Gateways are now prefixed with datasource in PinPoint to distinguish them from one another.
- **PIN-42:** Tool tips on gauges were only shown when hovering on the background of the control.
- **PIN-138:** The delete key did not work in the property browser.

4. Installation Instructions

Run the setup.exe file and follow the onscreen instructions.

Important

The settings are not migrated between versions. To use your old settings you have to manually move them to the current version in the Clavister section of your ApplicationData folder.

5. Known Issues

- **Settings lost when upgrading PinPoint.** The settings are lost when PinPoint is updated to a higher version. This can be remedied by manually replacing the configuration files in your ApplicationData folder with the older files.

6. Compatibility

The following section outlines the direct compatibility considerations as of PinPoint 1.1.0.7.

- Dashboards created with a previous version of PinPoint will show the Template wizard. This is because security gateway names will now be prefixed with the datasource, if fetched from FineTune (effectively, the name has been changed). Please save the dashboard using this version of PinPoint.

7. Getting Help

Technical Assistance via Telephone or Email

We offer timely and rapid response to customer inquiries and service requests via telephone or email. Don't hesitate to contact us if you have any questions regarding the upgrade or installation procedure.
