

S

Small & Medium Enterprise Series

Clavister S-Series

- At a glance

- **Powerful security gateways**
Security products for small and medium enterprises based on the award-winning Clavister security technology.
- **Space-efficient design**
Ranging from small convenient desktop models to slim 1U rack mountable units.
- **Rapid installation**
Installs and is up and running in less than a minute.

The new Clavister S-Series sets a new standard in its class. You no longer need to forgo security and quality for price efficiency.

The S-Series is developed for small and medium enterprises and similar organizations, and offers high performance and functionality. You will immediately recognize the S-Series as genuine Clavister quality.

Superior power

The sensation is unmistakable. Powering up a product from the new Clavister S-Series is like injecting raw energy into your network.

Even the entry model, Clavister S140, which is slightly bigger than a chocolate box, will make you see security products in a new light.

Taking off at 100 Megabits per second, you will understand why Clavister brings a new sensation to network security.

Protect your confidentiality

IPsec compliant VPN functionality is an integral feature of all Clavister products. With up to 300 simultaneous VPN tunnels, the Clavister S-Series is capable of enabling any complex VPN solution.

You can choose from a multitude of encryp-

tion algorithms, including the new 256 bit AES, as well as 3DES, DES, Twofish, Blowfish and CAST-128.

The Clavister S-Series of products is designed for communication. Supremely secure communication.

The Clavister S340 with 4 10/100 Ethernet interfaces.

We will not let a product failure ruin your business

You are well aware of that the health of your network is mission-critical. You are also well aware of that redundant back up security solutions are usually designed for large enterprises with a matching price tag.

We at Clavister realized that even the smallest of networks is mission-critical, for its users. That's why we never hesitated for a moment to include High Availability back up support in all models of the Clavister S-Series.

Not complex enough?

For a majority of smaller networks, four Ethernet interfaces are enough to create de-militarized zones and fail-over links.

But networks tend to grow. More servers are added and more security zones are needed.

No need to panic. The new Clavister S-Series allows you to grow with your needs. Every model in the S-Series supports several virtual LANs and since each VLAN is treated as a regular Ethernet interface, expansion capabilities are virtually unlimited.

Flexible, that is a Clavister product in a nutshell.

Clavister S-Series

- Quick Facts

Clavister S140

Throughput	100 Mbps
VPN Throughput (AES)	28 Mbps
Concurrent connections	16.000
VPN Tunnels	100

Network interfaces
4 x 100BASE-TX

Dimensions
Desktop, 290 x 44 x 152 mm, 1 kg

Clavister S240

Throughput	200 Mbps
VPN Throughput (AES)	28 Mbps
Concurrent connections	32.000
VPN Tunnels	200

Network interfaces
4 x 100BASE-TX

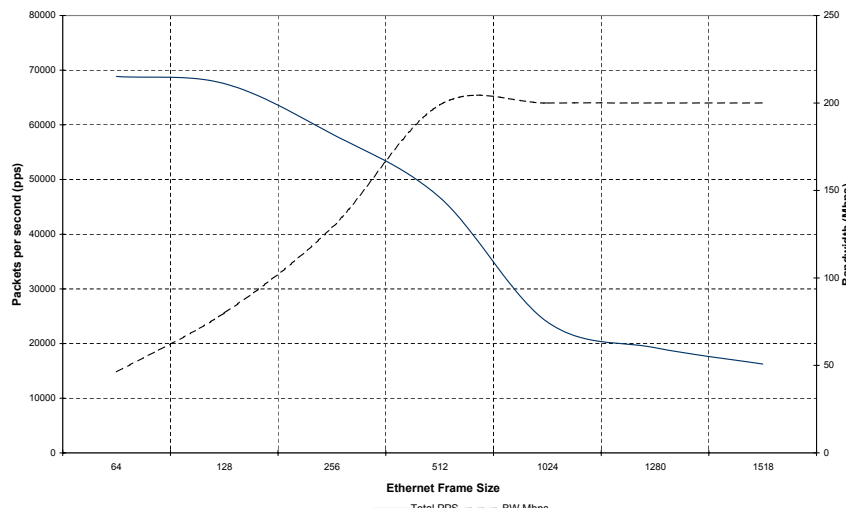

Dimensions
Desktop, 290 x 44 x 152 mm, 1 kg

Clavister S340

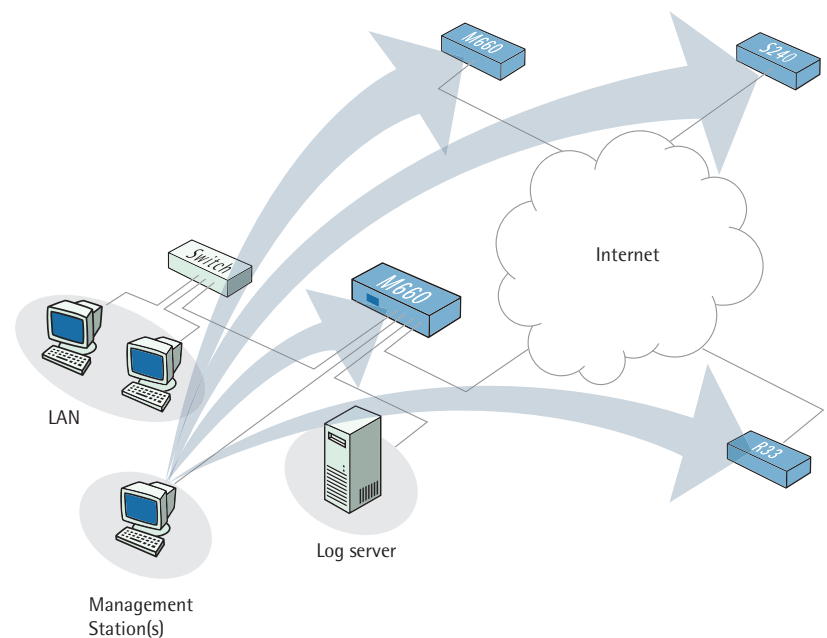

Throughput	300 Mbps
VPN Throughput (AES)	70 Mbps
Concurrent connections	32.000
VPN Tunnels	300

Network interfaces
4 x 100BASE-TX

Dimensions
Rack mountable 1U, 435 x 44 x 350 mm, 5.2 kg

100 Mbps Bi-directional throughput for the Clavister S240

Centralized, encrypted management of multiple firewalls
